Avon, MA 02322

A sample of "Mask-Ease", a screen masking system for screen printing produced by Scratch Art Company, was examined to determine whether or not the product conforms to standards established by the Federal Hazardous Substances Act and by ASTM D-4236.

The product is a combination of plastic sheets. There are no liquid components in the product.

Under normal conditions of use, as described in the directions, no chronic health hazards should exist for users of the product.

This conclusion is based on the knowledge that, when properly used, there is only minimal contact of the various plastic sheets with skin. The plastic sheeting will not adhere to skin, and is not hazardous material. The phrase "Conforms to ASTM D-4236" should be added to the label or to the directions.
